YPL records with great sadness the death, on 2 May 1980, of Dr M W S De Silva, editor of this special volume. Dr De Silva began planning this Festschrift as early as 1975 and was responsible for all aspects of editorial policy. At the time of his death, work on most of the contributions had reached first-proof stage. The editorial work has been completed by a small team consisting of John N Green, Christine Lockwood, Helen De Silva and Prasannajit De Silva.

CODE-SWITCHING IN LADY CHATTERLEY'S LOVER

In multilingual societies it has been suggested that the use of all the available linguistic forms is a prerequisite for full participation in the community (Gumperz, 1964: 206-07). That is, in a French/English bilingual community, it is necessary for members of the community to know and speak both languages if they are to obtain the maximum status and benefits possible in that community. Recent research in bilingualism, in fact, has focused on exactly how this code-switching actually takes place. Innumerable interesting questions present themselves to linguists in this regard, usually involving the when's, the how's, the where's, the who's, the how much's of such switching. The assumption, of course, is that code-switching is not random and that certain social conditions create the need and dictate the procedures for engaging in it. Gumperz goes so far as to state that '... alternation does carry meaning' (1971: 316) and that the very act of switching serves social and semantic functions.

The concept of 'communicative competence' (Hymes, 1967) involves the recognition that speakers have the ability to use their speech varieties for specific functions, social or linguistic. The actual investigation of communicative competence in various language contact situations has been relatively recent and not carried very deeply in many language learning situations. For example, the effective learner of a second language may well acquire effective or native-like phonology or syntax in a second language but never acquire a working knowledge of the crucial language functions that will enable him to open and close conversations, infer meaning from contexts in which that meaning is not explicitly carried by the lexicon, interrupt, cajole and many other language functions which have been shown to be critical measurement points of communicative adequacy. Likewise, little or no attention has been given to the question of the social benefits which can accrue to the foreigner who preserves certain phonological or grammatical flavourings from his native language as he acquires a second tongue. It appears even heretical to suggest that a second-language learner may be tolerated in a different way or even tolerated preferentially if the native speakers are given adequate signals of his foreignness.

Research on alternation between codes has indicated rather clearly that such behaviour is rule-governed (Ervin-Tripp, 1972). The regularities which are shown to result from such alternation relate to factors which make up the individual speech events. Such factors include topic, code, situation and participants (Hymes, 1972: 58-65).

Topic (what is being talked about) has been discussed in the context of code-switching on several occasions (Ervin-Tripp, 1972; Fishman, 1972; Gumperz, 1964; Hymes, 1972) and empirically analysed
by Ervin-Tripp (1964), by Gumperz and Blom (1971) and Strick (1973). In each case the research related code-switching to dominant and second languages as a function of topic.

Ervin-Tripp (1964) investigated the effect of variation of topic and receiver on switching between Japanese and English. Interviews with Japanese immigrants were conducted by Japanese and Caucasian Americans. If the listener was Japanese and the topic related to American culture, the speaker seemed to have no difficulty if speaking English. On the other hand, if the interviewer was Japanese and the topic related to Japanese culture, the conversation in English was less perfect syntactically, less fluent and was punctuated by Japanese borrowings. Ervin-Tripp concluded that changes in topic and listener had marked effect on the formal features of speech (1964: 97).

Similarly in their research on code-switching in the speech of California Chicanos, Gumperz and Hernandez (1971) found that a socially identifiable topic often determined which code the bilingual would select. For example, whenever Chicano identity was an underlying theme, Spanish was used. In an earlier study of the effect of topical variation on code-switching in a small Norwegian village (1964 and 1971) Gumperz concluded that of the two dialects spoken in that village, the local one was preferred in issues related to community identification while standard Norwegian was used in topics which were more national in scope. The effect of topic was carried even further when Gumperz and Blom indicated that code-switching would not occur in friendly gatherings of people who composed a network of local relationships, even if topic is varied. On the other hand, if both local and non-local relationships obtain, code-switching could occur based on topical variation. Thus the speakers' verbal strategy of conveying social information is revealed by switching from the local dialect to the standard.

The systematic study of code-switching by linguists usually involves the following techniques: anonymous observations (Gumperz, 1964: 171-72; Gumperz and Blom, 1971), individual informant interviews (Labov, 1966; Shuy, Wolfram and Riley, 1968) and small-group elicitation or discussion sessions (Gumperz, 1971; Labov, 1970: 46-49). As far as can be determined, little or no work has been done by linguists in studying the already written observation of code-switching by sensitive writers. The hypothesis of the present study is that a sociolinguistic theory of code-switching can be applied not only to the examination of real conversational data, whether elicited surreptitiously or in interview contexts, but also to the written representation of such real conversational data by competent authors. By applying what is known about code-switching as rule-governed behaviour we should be able to determine the degree to which a given author consistently represents this rule-governed behaviour and, to the extent which he is consistent or inconsistent, evaluate that author's innate sociolinguistic effectiveness. For the sociolinguist, the information being examined (a novel, a short story or a poem) may be little more than a new batch of data through which he can crank and test his sociolinguistic theory and machinery. To the literary critic, however, the results of recent research in communicative competence in general, and in this case, code-switching in particular
offer a new and objective instrument for analyzing an author's consistency in representing reality, for examining a writer's subtle shifts of intention or indications of characterization. It has been observed that great authors write better than they know. One would assume from such a statement that writers not only internalize sociolinguistic rules, language functions and formal language knowledge, but that they also make use of such features without really being able to say what it is they are doing as they do it. This is not surprising to linguists who have long marvelled at how well children acquire their native language without having the foggiest notion of how to describe this knowledge to others. It might be argued, of course, that such behaviour is not really writing better than an author knows (depending on how knows is defined); it is, rather, writing better than his ability to describe his ability to write.

A sociolinguistic analysis of literature promises nothing to the writer in this case, but it does offer a theory and methodology for discussing what it is that a writer does and how well he does it.

In order to illustrate the usefulness of the knowledge of code-switching in a literary context, we have selected D H Lawrence's novel Lady Chatterley's Lover, which contains one of the classic literary instances of dialect-shifting. Mellors, the gamekeeper in the household of Lord and Lady Chatterley, speaks what Lawrence describes as broad Derbyshire dialect on many occasions. On the other hand, he is also known to speak a rather standard version of English, perhaps as a result of his being '... attached to some Indian colonel who took a liking to him' when he served as a lieutenant in the army. We get a glimpse of this linguistic situation when Lady Chatterley asks her husband: "How could they make him an officer when he speaks broad Derbyshire?". To this Sir Clifford replies: "He doesn't ... except by fits and starts. He can speak perfectly well, for him. I suppose he has the idea if he's come down to the ranks again, he'd better speak as the ranks speak." This speech certainly reflects the observations of sociolinguistic researchers on how social information is revealed by language switching. It is also a strong indication that Lawrence was probably consciously aware of this sociolinguistic principle. What remains is to observe how well he carried it out in his representations of the speech of his characters.

The codes involved in Lady Chatterley's Lover are assumed to be two homogeneous and clear-cut dialects of English. This raises one theoretical and terminological problem for linguists, whose definition of code historically has usually meant two separate non-mutually intelligible language systems. It is not at all clear that Gumperz uses the term this way, however, and a good case can be made for lumping code-switching with the dialect-switching (sometimes called style-switching) in terms of their roles and effects. Regardless of exact terminological precision, it appears that the two language systems in contrast are a kind of standard English versus a broad Derbyshire dialect. Lawrence is relatively clear in the instances in which he wishes his reader to perceive the dialogue as being in the latter dialect. The accuracy of his representation will not be at issue here but suffice it to say that phonology of this dialect is represented in spellings (yer for
you, waitin' for waiting, 'adn't for hadn't, a' for all, Ah for I,
please for place, ax for ask, abaat for about, ma'es for makes etc.
Occasionally, the orthographic representation appears to be mere
eye-dialect, as in th' for the, du for do and anuther for another,
but generally speaking, Lawrence represents broad Derbyshire pro-
nunciation rather consistently. The grammar of the dialect is
predictably non-standard, with double negatives (Sir Clifford
'adn't got no other key then?), non-standard verb usages (Ah thout
it wor ordinary) and local syntactic forms ('Appen Sir Clifford 'ud
know). The standard dialect is characterized primarily by a regu-
larity of orthography and grammar, but additionally by the absence of
the marked forms of broad Derbyshire such as those noted above. In
the minds of writers, as apparently in the minds of most speakers,
standard is primarily the absence of stigmatized forms (Shuy, 1969).

In terms of the settings and participants involved in the
switching, Mellors speaks only standard English to Sir Clifford,
Sir Malcolm and Mrs Bolton. He speaks standard English to Hilda
until she insults him, at which point he answers her in dialect.
He also speaks dialect to Hilda, primarily when she is a visitor in
his house. He speaks local dialect consistently to his dog, and
to his penis on the occasions which he addresses it as a person.
It is only when Mellors switches in speaking to Lady Chatterley
that clarification is required.

As noted above, topic also is an essential factor in code-
switching. Consistently throughout the novel certain topics are
discussed by Mellors in standard English only (three separate
occasions), Mellors discusses it only in standard. The same can
be said for the topics of sex (mutual orgasm, his libido, and any
memories of their past sexual experiences), three discussions about
their philosophies of life, Mellors' personal background, the topic
of divorce (four times) and discussions about what constitutes good
English. Three times the topic of Mellors' first wife is discussed
in standard English and once in dialect. Likewise, Mellors dis-
cusses his work as gamekeeper once in standard and once in dialect.
More personal topics, however, are generally discussed in dialect,
including his relationship with his daughter, the general topic of
children and any philosophical discussions relating to the hardship
of the life of a peasant.

In terms of language situations or functions, the consistent
contrast between standard English and dialect in Mellors' speech
is maintained. Introductions, conversational openings, conversa-
tional closings, insults, invitations to sex and rejection of
sexual overtures are in standard English, while all representations
of meal-time conversation, talk during love-making and post-
intercourse afterglow conversations were in dialect.

The novel contains twelve major speech events, separated by
descriptive phrases and authorial narrative. The term speech event,
as used here, will refer to extended conversations in which switching
is potential or actually takes place. The four major ingredients
for code-switching will be noted for each speech event.
Speech Event 1. (in Chapter V)

Topic: Sir Clifford introduces Lady Chatterley to Mellors.
Participants: Sir Clifford, Lady Chatterley, Mellors.
Setting: Sir Clifford's home (Wragby).
Code: Standard English (SE).

One hint of switching or potential switching comes from Lawrence, who notes that Mellors corrected himself on one occasion:

"But you've been here some time, haven't you?"
"Eight months, Madam - your Ladyship!" he corrected himself calmly.

In addition, Lawrence comments on the nature of Mellors' speech:

"And do you like it?"
"Why yes, thank you, your Ladyship. I was reared here ..."
His voice on the last words had fallen into the heavy broad drag of the dialect ... perhaps also in mockery because there had been no trace of dialect before.

Speech Event 2. (in Chapter VIII)

Topic: Discussion about the hut in the woods. It was used by Mellors but Lady Chatterley found it a nice place to come and sit when taking a walk. They discuss whether or not she can/should use it and whether or not he should stop using it as a work centre.
Participants: Lady Chatterley and Mellors.
Setting: At the hut in the woods.
Code: Primarily vernacular. Mellors uses SE only in response to Lady Chatterley's question about why he should worry whether or not she needs the hut to herself:

"Why should I take any notice of you and your being here or not? Why is it important?" ...
"It's not, your Ladyship. Not in the very least."

Lady Chatterley is not satisfied with this answer and pursues the point again:

"Well why then?"

to which Mellors changes the subject:

"Shall I get your Ladyship another key then?"

She responds with an emphatic no, indicating clearly that it is impudent of Mellors to think that she would even want to come there. At this point, Mellors returns to the vernacular:

"Ah'll get it anyhow. We'd best 'ave two keys ter th' place."
Lady Chatterley is furious. She calls him insolent, and Mellors, still in the vernacular, denies that he ever had any untoward intentions and plays the role of the ignorant and humble worker:

"I niver meant nuthink. Ah on'y thought as if yo' come 'ere, Ah s'd 'ave ter clear out, an' it 'd mean a lot of work, settin' up somewheres else ..."

Lawrence comments, as this speech event ends, that Lady Chatterley is in total bewilderment:

She was not sure whether she had been insulted and mortally offended, or not. Perhaps the man really only meant what he said; that he thought she would expect him to keep away. As if she would dream of it! And as if he could possibly be as important, he and his stupid presence.

The effect of Mellors' switching is clear. He uses SE in the role of chastized servant, similar to a butler stereotype, offering SE noises with little more than functional rather than semantic intent (a sort of "As you wish, Madam - Whatever Madam desires"). In such a role, he can perfectly legitimately assume the accompanying role of professional ignorance. Just as it was within Mellors' character of ignorant, humble servant to ask if she wanted a key, it was also within his province as ignorant, humble gamekeeper to reject her denial and say that he'd have one made anyway. The passive-butler, SE-speaking role would not permit this sort of ignorance. It would have required a passive acceptance with an "As you wish, your Ladyship". To force the key upon Lady Chatterley he had to switch servant rolls to that of the even more ignorant and humble outdoorsman, who would not have to accept passively. The gamekeeper could legitimately misunderstand, even to the extent of countermanding her wishes.

Small wonder that Lady Chatterley left the setting in confusion. She had been dealing with at least two surface-role representations (formal and informal servants) as well as the real Mellors, whoever he might turn out to be. The role-shifting has served Mellors well. At the onset of this conversation he had dazzled her with what Lawrence called 'the fog of the dialect'. Her reaction was to question:

"Why don't you speak in ordinary English?"

to this Mellors responds:

"Me! Ah thowt it war' ordinary."

In contrast to speech event number 1, the second speech event is vernacular-dominated. The topic shifts from stylized speech functions of event number 1 to the local topic involving the nature and responsibilities of the gamekeeper's work. The setting shifts from Sir Clifford's house in event number 1 to the gamekeeper's work-hut in number 2, a more amenable place to the use of vernacular.
The participants also vary, and Mellors' pattern of never switching in the presence of Sir Clifford is firmly established. From the perspective of the sociolinguist, these events show realistic predictability. The scenes described by the novelist might well have been tape recordings of real-life conversations. From the perspective of the literary critic, this exercise offers a useful evaluation instrument for the effectiveness of a writer in reflecting the reality he attempts to depict. The performance of any creator of literature is a struggle with form. Writing demands conformity and restricts freedom in the interests of the formal mechanism. The illusion of reality in conversation is one of the measures of authorial validity. Lawrence might have narrated these scenes without conversation, using the vision of the outsider. Instead, he chose to use the vision of the insider, and, in doing so, makes himself vulnerable to the charge of artificiality or inconsistency.

Speech Event 3. (in Chapter X)

Topic: Mellors' obtaining a key to the hut for Lady Chatterley and a brief discussion of the hut's function (involving the hens).
Participants: Mellors and Lady Chatterley.
Setting: At the hut in the woods.
Code: SE, switching to vernacular.

Again, the hens, especially their symbolization of warmth, life and feminine tenderness, affect Lady Chatterley greatly. She cries. Mellors is moved, touches her shoulder and moves his hand down her back, then invites her into the hut. Inside, he instructs her to lie down and then he lies down beside her. Their first intercourse follows, with all conversation in standard English. It is not until they are past that Mellors begins to use vernacular. They discuss the complications of their behaviour and the concept of love. Then Lady Chatterley asks:

"But you don't hate me, do you?"

Mellors responds:

"Nay, nay," in Derbyshire dialect.

Speech Event 5. (in Chapter X)

Topic: Sex, being found out, their relationship.
Participants: Lady Chatterley and Mellors.
Setting: At the hut.
Code: Vernacular, switching to SE, back to vernacular, back to SE, back to vernacular and back to SE.

The scene opens with Mellors coming upon Lady Chatterley who was sitting in the hut:
"You come then," he said, using the intonation of the dialect.

Mellors continues to use the dialect throughout their discussion of whether or not people will discover them. He introduces sex in standard but returns to dialect during and after their intercourse. Lawrence exerts the authorial perspective only once, when he notes that Lady Chatterley resented the dialect: 'His "Tha mun come" seemed not addressed to her, but some common woman.' As they discuss her leaving, however, Mellors returns to standard: "It's quarter past seven," he said, "you'll do it." He had changed his voice, Lawrence reports. But as they are parting, he lusts for her touch again, and says so in dialect. They embrace, then separate, and his leave-taking returns to standard:

"Good-night, your Ladyship."

Speech Event 6. (in Chapter X)

Topic: Mellors' libido and their own sex act.
Participants: Lady Chatterley and Mellors.
Setting: On the road.
Code: Entirely in SE.

Mellors intercepts Lady Chatterley and almost forcibly takes her into the woods to a clearing suitable for sex. She receives him passively, but, uncontrollably, she climaxes almost in spite of herself. They discuss this phenomenon entirely in SE.

Speech Event 7a. (in Chapter XII)

Topic: His work, her proposed trip to Venice, their sex experience, their relationship.
Participants: Lady Chatterley and Mellors.
Setting: Mellors' cottage.
Code: SE opening comments, falling into dialect at the meal ("Shall Y'ave something?") returning to standard when Mellors discusses his work (Lawrence notes: 'He spoke cold, good English') and when they talk about her proposed trip. Mellors remains in standard as they discuss their past sex experiences and the possibility of having used each other. The sex invitation, as usual, is in standard, but they decide to go to the hut rather than to have intercourse at his cottage after dinner. Lady Chatterley then left and went home.

Speech Event 7b. (in Chapter XII, immediately following Speech Event 7a)

Topic: The hens, sex introduction, afterglow small talk.
Participants: Lady Chatterley and Mellors.
Setting: At the hut.
Code: After greeting in standard, Mellors invites her into the hut in dialect ("Shall us go i' th' ut?"). Their sex preparation discussion appears to be in standard, but it is difficult to ascertain Lawrence's exact
intended representation ("Have you left your underthings off?" appears to be quite standard). Once he touches her, however, the dialect comes forth ("Eh, thar's nice!"). After intercourse, dialect dominates, as usual, even to his evaluation of her performance. As they separate, she cries out for him, leading to intercourse again, which she fully participates in this time and climaxes fully. The afterglow conversation is, as usual, in dialect. This time, however, Lady Chatterley also tries to speak the dialect:

"Tha mun come one naight ter th' cottage, afore tha goes; sholl ter?" ...
"Sholl ter?" she echoed, teasing.
He smiled.
"Ay, sholl ter?" he repeated.
"Ay!" she said, imitating the dialect sound.
"Yi!" he said.
"Yi!" she repeated.
"An slaip wi' me," he said. "It needs that. When sholt come?"
"When sholl I?" she said.
"Nay," he said, "tha canna do't. When sholt come then?"
"'Appen Sunday," she said.
"'Appen a' Sunday, Ay!"
He laughed at her quickly.
"Nay, tha canna," he protested.
"Why canna I?" she said.
He laughed. Her attempts at the dialect were so ludicrous, somehow.
"Coom then tha mun go!" he said.
"Mun I," she said.
"Maun Ah!" he corrected.
"Why should I say maun when you said mun," she protested.
"You're not playing fair."

It appears in this speech event that Lawrence is using dialect to describe Mellors' power over Lady Chatterley. Here, as elsewhere, their touch is accompanied by the almost immediate occurrence of dialect. As usual, sexual afterglow conversation is also in vernacular. But in this event, Lady Chatterley is so into the setting that she actually begins to speak the dialect. Though treated somewhat playfully by Lawrence, it appears to represent a significant signal on Lawrence's part that Mellors has achieved some sort of power over her.

Speech Event 8. (in Chapter XIII)

Topic: The predicament of the breakdown of Sir Clifford's motorized wheelchair.
Participants: Lady Chatterley, Sir Clifford, Mellors.
Setting: On the road.
Code: Standard English entirely. Most of the conversation is between Mellors and Sir Clifford but even the talk between Mellors and Lady Chatterley is in standard.
In this speech event Mellors assumes the role of the indoor servant, responding disinterestedly and passionlessly to Sir Clifford's insults and childish behaviour. After the worst of the behaviour, Sir Clifford speaks:

"Do you mind pushing her home, Mellors?" he said in a cool superior tone. "I hope I have said nothing to offend you," he added in a tone of dislike.
"Nothing at all, Sir Clifford!"

Speech Event 9. (in Chapter XIV)

Topic: Sir Clifford, Mellors' dog, Mellors' wife, divorce and marriage, types of intercourse, lesbians, their past sex life.

Participants: Lady Chatterley, Mellors, his dog, his penis.

Setting: They meet at the gate to her house, then walk to Mellors' cottage.

Code: The opening conversation, as always, is in standard. Their discussion of the wheelchair incident, his past pneumonia and Sir Clifford's lack of manhood are in SE. Mellors speaks vernacular to his dog, but Discusses dogs with Lady Chatterley in standard. He talks about his wife in dialect, switching back to standard when the topic of divorce is approached. Standard English continues through the following topics (his first girlfriend, types of intercourse, lesbian women and a clinical analysis of their own sex experiences). He becomes somewhat morose and rejects the notion of their sleeping together. On his way out of the room he looks at Lady Chatterley, touches her, and erects, saying in dialect once again, "Ma little lass! Dunna let's fight! Dunna let's niver fight! I love thee an' th' touch on thee. Dunna argue wi' me. Dunna! Dunna!" As they prepare for intercourse, she admires his penis, at which point Mellors addresses it in dialect: "Ay ma lad! Tha'art thee right enough. Yi, the mun rear they head! Th eer on thy own, eh? An' ta'es no count o' nobody!"

The post-intercourse conversation is, again, in dialect, fading to a rather weakly represented standard English in the closing and leave-taking setting.

Speech Event 10. (in Chapter XV)

Topic: Her future trip to Venice, the colonies, Lady Chatterley's possible divorce, wealth, the Army colonel for whom Mellors once worked, tameness in men, children, hardship, life.

Participants: Lady Chatterley, Mellors, Mrs Bolton.

Setting: At the hut.

Code: Frequent switching.
At first, the topics of the forthcoming trip, the colonies, her possible divorce, wealth, the Army colonel and male tenderness are conducted in standard English. Then Lady Chatterley says: "Tell me you want a child...". Mellors' answer begins in standard but moves quickly into dialect as he ruminates about children and the hardships of life. While he talks, she handles his genitals but fails to arouse him. As his talk moves more and more away from the hardships of a collier's life to a more philosophical discussion of the doom of all mankind, his speech becomes increasingly standard. Lady Chatterley was in no mood for such moroseness and she broke the mood by taking off her clothes and running out into the rain. This was enough for Mellors. He followed suit and caught her on the path where they had intercourse, in the driving rain. Afterward, they go back to the hut and the afterglow conversation is, as always, in dialect. After a while Lady Chatterley asks: "You don't mind, do you, that I'm going away?" With a blank expression he answered: "You do as you wish." Lawrence observes: 'And he spoke in good English.' The topics are her trip to Venice and the possibility of her divorce from Sir Clifford. Suddenly he goes outside to pick some flowers to playfully accomplish his mock wedding of his 'John Thomas' to her 'Lady Jane'. This topic sends Mellors back into dialect:

"This is John Thomas marryin' Lady Jane," he said. "An' we mun let Constance an' Oliver go their ways..."

His thought along with his dialect is interrupted by his sneeze, after which he talks about shirts, in general, in standard as he puts his own shirt on. He laments that perhaps his Lady Jane will meet someone else in Italy. She tells him not to say such things and he returns to dialect as he talks to 'Lady Jane' (rather than to Lady Chatterley) as though she were a separate person. Lawrence observes: 'She never knew how to answer him when he was in this condition of the vernacular.' A few sentences later, as they are walking back toward Wragby, they meet Mrs Bolton. Mellors says goodnight to both in proper standard English.

Speech Event II. (in Chapter XVI)

Topic: Introductions, table talk, normal English, the risk involved in the affair, insulting, afterglow.

Participants: Lady Chatterley, Mellors, Hilda (Lady Chatterley's sister).

Setting: In a car, then at Mellors' cottage.

Code: Frequent switching.

Hilda and Lady Chatterley are driving. They meet Mellors, park the car and walk to the cottage. All conversation is in standard until Hilda sits in Mellors' chair. Lady Chatterley tells her to move and Mellors responds: "Sit yer still." The meal is conducted in dialect (put on rather heavily, it appears). Hilda asks why he speaks Yorkshire. He tells her it is Derby.

"Derby, then! Why do you speak Derby? You spoke natural English at first."
"Did Ah though? An' canna Ah change if Ah'n a mind to 't?
Nay, nay, let me talk Derby if it suits me. If you'n
nowt against it."
"It sounds a little affected," said Hilda.
"Ay, 'appen so! An' up i' Tevershall you'd sound affected."

Hilda continued to observe Mellors, concluding, at last, that he was acting.
"Still!" she said as she took a little cheese. "It would
be more natural if you spoke to us in normal English, not
in vernacular."
"Would it?" he said in normal English. "Would it? Would
anything that was said between you and me be quite natural ...?"

Lawrence notes here that Hilda was baffled and annoyed. "After
all, he might show that he realized he was being honoured. Instead
of which with his play-acting and lordly airs, he seemed to think
it was he who was conferring the honour." Mellors continues briefly
in standard until Hilda asks him if the risk of the affair is worth
it. His answer is in dialect, which he stays in until Hilda insults
him. His response is in calculated standard: "But you deserve what
you get: to be left severely alone." Hilda stalks out leaving Lady
Chatterley and Mellors alone. She initiates love-making and he moves
back into dialect through intercourse and afterglow talk.

Speech Event 12. (in Chapter XVIII)

Topic: Lady Chatterley's return from Italy, what happened
while she was away.
Participants: Lady Chatterley, Mellors, Sir Malcolm, Hilda.
Setting: At a hotel (first alone with Lady Chatterley, next
with Sir Malcolm [her father] and last with Hilda
[her sister]).
Code: Predominantly SE, with similar switches into vernacular.

The greeting behaviour, as Lady Chatterley and Mellors first
meet after a long absence, is stiff and standard:

"Ah, there you are! How well you look!"

They discuss how it was for him while she was gone. He talks
about how little he has to offer her in a clinical, standard fashion. He
observes that the world is artificial and fickle, and that it is
touch that we are all afraid of. She says, "Then hold me." He does
and then begins to use dialect. Then she asks if he still loves his
wife. He answers in standard and continues in it after both Sir
Malcolm and Hilda come in. He cannot bear the scheme which they
propose to protect her name and his in his near despair at the whole
affair. "I agree to anything. The world is a raving idiot." Then
he looks at Lady Chatterley and says in dialect:

"Ma lass! The world's goin' to put salt on thy tail."
CONCLUSION

Two basic questions have been addressed in this analysis of the use of code-switching by D H Lawrence in Lady Chatterley's Lover.

(1) Can an author represent a linguistically complex phenomenon such as code-switching in a realistic fashion?

Research in code-switching has clearly indicated that social conditions create the need for varying one's language use. Those who have at their disposal a range of codes, whether languages or dialects, seem to be the speakers who are advantaged. In the case of language code-switching, however, the bilingual must adjust to the language of the monolingual if any communication is to take place at all. In at least one sense of the term, the bilingual thus moves to a point of disadvantage, especially if the language being used is not his native tongue. In terms of power, he is forced to use his less powerful code by the ignorance of the monolingual.

The power-condition involved in code-switching does not always work in this way, however, especially when the codes are mutually intelligible dialects of the same language. In the case of Lady Chatterley's Lover, the vernacular and the standard are mutually comprehensible, that is, speakers of both dialects have receptive competence only in standard. Mellors has productive competence in both. The only person capable of using language variability to provide alternation, and thereby to create meaning from function itself, is the speaker who can speak (and is allowed to speak) two dialects. Only Mellors had the right to switch roles from the standard-speaking inside servant to the vernacular-speaking woodsman, since his servant roles overlap in both areas. Because of his unique background, he can also switch into a standard-speaking non-servant role. As the non-local participant, his right to switch is established. In a sense, Mellors is the only participant in the novel who can enjoy the luxury of providing meaning by the very act of code-switching. He can insult, reject, withdraw, refuse to answer, disobey, mock, hide and perform many other functions, all through the meaning offered by switching in sharp contrast with the semantic meaning of the words being used.

Linguists have little examined the power-relationship offered by this sort of control dictated by code-switching. Mellors exhibits it beautifully, in a type of linguistic fencing which parries, thrusts, and feints with the greatest artistry. He can deny his own worth and his own surreptitious intentions while at the very moment having a key made for Lady Chatterley to meet him at their trysting place. He can seduce her in standard English, then excuse his behaviour with the very vernacular which he is using to make the excuse. He can keep Lady Chatterley confused about their relationship by referring to her as 'ma lass' and 'your Ladyship' in the same speech event, at the same time permitting this very switching to be the cover for any indiscretions for which he might be guilty. And when his cover falls in danger of being exposed ("Why don't you speak in ordinary English?"), Mellors can, in his very switching, hide more truth than that which is hidden by his answer ("I thowt it wop ordinary").
Mellors' ultimate power created through code-switching, however, seems evident in the intercourse scenes. As noted earlier, the introduction to intercourse is in standard English in each of the eight major intercourse scenes in the novel. Mellors' conversation after intercourse is invariably in the vernacular. Lady Chatterley's language is predictably standard throughout the novel but evidence of her coming under Mellors' power seems to be apparent in intercourse scene number five (in Speech Event 7b) when, after climaxing explosively, she begins to try to speak Mellors' vernacular. He finds it charming, but somehow ludicrous, and feels obliged to play school teacher to her by correcting her inability to speak the vernacular accurately.

In answer to the first question posed by this investigation, then, we can observe that not only does Lawrence represent the linguistically complex situation of code-switching with accuracy, but that he also makes use of the basic understandings of code-switching as the critical vehicle for motivation in the novel. That is, Lawrence portrays code-switching in a manner which parallels that which might have been revealed by tape recordings of real life conversations. Even without the benefit of research on the rule-governed alternations in code-switching, Lawrence has caused Mellors' speech to vary consistently according to the major factors which subsequent research has demonstrated to be critical. Not only has Lawrence done this with amazing perception, however, he has also made use of its basic truths upon which to build the major action and assumptions of the story.

(2) Does the sociolinguist have a contribution to make to literary criticism?

It is always presumptuous of members of one academic community to claim that members of a different community will survive and prosper only if the latter learn the secrets of the former. Such is not necessarily the claim of this paper, although it seems apparent that the presumed advantages of recent efforts at disciplinary segregation have proved to be specious. Disciplines leak. It is difficult for many linguists to determine exactly what field they really belong in. Whether or not it wants to be, language is involved in philosophy, psychology, history, sociology, mathematics, anthropology, literature and education, to name only a few disciplines.

It is hoped that nothing in the current analysis is an attack on what literary critics do or do not do. The analysis of code-switching is relatively new even to sociolinguists and it is in no way fruitful to criticize a field for not doing something that is not being done elsewhere.

What this paper hopes is that certain tasks of the literary critic will be aided by recent theoretical developments in sociolinguistics. Specifically, literary critics can be helped to ascertain how effectively and how consistently an author portrays the language of his fictional characters. Recent developments in conversational analysis can provide a scientific touchstone (in well-defined contexts) for literary comparison. One type of analysis might have been to match the orthographic representation of broad Derbyshire dialect with the linguistic Atlas research which has been done in that area. In this case, we have chosen rather to make
use of a measurement point which is less concerned with the surface
manifestation of language representation (the phonology and grammar)
and more concerned with the meaning, particularly the sort of meaning
which may or may not be consciously controlled by the author. If
we had analysed the former question we could learn about how well
the author knew the dialect he represented. The latter question
gets at a much larger issue: how well does the author know how to
make use of the uses of language?

A second type of question with which sociolinguistics can
provide assistance to the literary critic is in the broad area of
authorial awareness. A legitimate question often asked of authors
is the extent to which they remember, mimic or otherwise write with
structural integrity without apparent artistic intention. That is,
how much did Lawrence really know about what he was doing with con-
versation in Lady Chatterley's Lover? Did he write from remembered
fragments and native "feel" or was he aware of the consequences of
code-switching as he developed the dialogue?

In the case of this novel, it is clear that Lawrence must have
been aware of the patterned structure of conversational rules. Not
only does he structure code-switching along the patterns dictated
by analysis of actual code-switching in non-fictional contexts, but
he also makes authorial-voice comments on the language being used,
for example:

'His voice on the last words had fallen into the heavy
broad drag of the dialect ... perhaps also in mockery
because there had been no trace of dialect before.' (Chapter V)

'He spoke cold, good English.' (Chapter XII)

'Her attempts at the dialect were so ludicrous, somehow.'
(Chapter XII)

'And he spoke in good English.' (Chapter XV)

'She never knew how to answer him when he was in this
condition of the vernacular.' (Chapter XV)

These and other instances of the authorial voice offer supporting
evidence for the belief that Lawrence knew exactly what he was doing
as he did it. Even when he put evidences of how language functions
carry meaning in the words of his characters we get a clear picture of
authorial knowledge and intention. The marvellous conversation about
code-switching in Speech Event 11 is ample evidence of this. Hilda
accuses Mellors of switching (apparently Hilda was the only character
who was conscious enough of the phenomenon to be able to isolate it
for conversation). Mellors responds (in vernacular) that he can
switch if he wants to. To Hilda's suggestion that his Derbyshire
dialect sounds affected, Mellors responds: "An' up i' Tavershall
you'd sound affected." This sophisticated insight has been overlooked
for decades in this country and it is no credit to either English
or Linguistics departments that is is so little understood some
half-century after it was written.
In summary, then, it should be repeated that recent developments in sociolinguistic analysis offer analytic assistance to the field of literary criticism. Unfortunately, the analysis performed in this paper tells us little that we did not already know about Lawrence's considerable abilities as a novelist. What it does provide is a way of capturing and discussing that ability in measurable terms, perhaps as a point for comparing that same ability in other authors but at least as a way of more concretely describing what it is that Lawrence did so well. Perhaps this is all that science can ever offer art.
